

Biosteril®

With the BIOSTERIL® brand, the Kündig Group is the market leader in the field of germ reduction. Each year, we process several thousand tons of tea, seeds, herbs, spices, dried mushrooms, dried vegetables and pharmaceutical raw materials. With one of the most sophisticated plants in Europe, Kündig has been operating germ reduction facilities in Ritschenhausen, Thuringia, since 1994. Thanks to decades of experience and an in-depth understanding of the processes at hand, our company is able to effectively reduce microorganisms in products without affecting their sensory properties.

NATURAL GERM REDUCTION Germs in dried plant raw materials are reduced efficiently in a natural and gentle process by means of saturated steam. This method is particularly suitable for the processing of certified organic products since no chemicals are used. For the purpose of stock preservation, this method also enables the proven elimination of harmful organisms.

You can trust BIOSTERIL® for producing the following results:

- Reduction of total germ count to safe levels
- Eradication of pathogenic germs
- Elimination of mould and yeast
- Eradication of insects, larvae and eggs

CUSTOMISED TO YOUR PRODUCT Individual product properties require tailor-made solutions. To determine the ideal treatment parameters, we have a pilot plant with which we can test small quantities cost-effectively. This ensures a maximum in product safety at ideal product quality.

CERTIFIED BIOSTERIL® is GMP-certified according to EU Directive 2001/83 / EC and thus fulfils the requirements for germ-reduction of active ingredients for herbal medicinal products. By default, recognised labels such as EU BIO, Bio Suisse, NOP, Kosher, Halal, IFS Food and FSSC 22 000 guarantee quality and safety.
